# TRUST IN EVERY DIGITAL INTERACTION

## \_TO BE

To make the process of identifying and interacting across the internet a simpler, safer and meaningful experience for all, we have created a lifetime portable identity with which any holder can present verifiable credentials everywhere online.

## \_TO TRUST

Massive data breaches and cybercrime have challenged the trust between consumers and service providers, and brands face a difficult task to restore it. By giving ownership of their data back to the users, Nxxtech helps organizations to rebuild the relationships and create new value streams.

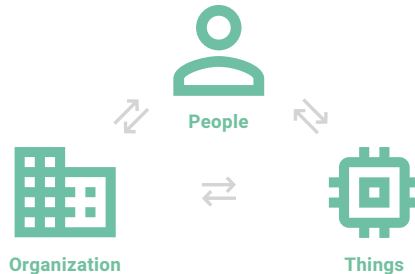

## \_TO SHARE

By giving the users the ability to decide who and why they share their personal data with, the confidence in the services they interact and share is restored and strengthened.

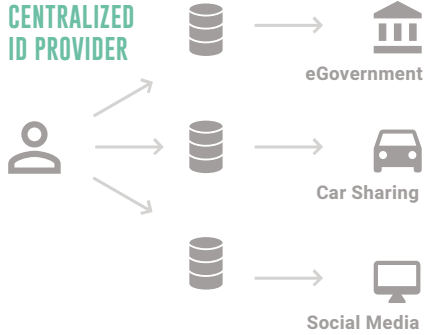

# NXXTECH UNIVERSE OF ENTITIES

We believe blockchain identity should be at the heart of every digital interaction. Using Nxxtech, the people, organizations and things can enter in a direct and secure interaction anywhere online without the need for usernames or passwords. In the universe of trusted entities, countless combinations of meaningful relationships are possible, secured by harnessing the power of blockchain technology.

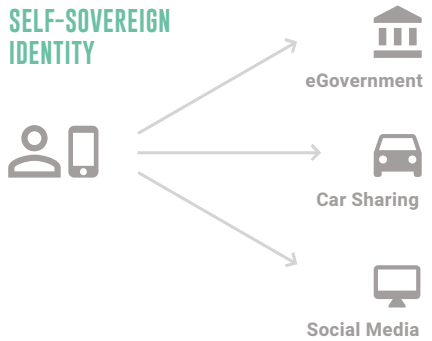

# NXXTECH BLOCKCHAIN IDENTITY

Unlike the existing solutions, blockchain is structured from the perspective of the individual. It enables that each person, organization or thing receives a self-sovereign identity, serving as a unique entry and a point-to-point exchange of information in preapproved relationships.

For an end-user, Nxxtech identity may just resemble to the already known logins. However, the technological advancements in the back-end ensure direct peer-to-peer communication and Data privacy of data, resulting in fast transactions and quick online verifications.

## WHAT IS IN IT FOR BUSINESSES?

As the boundaries of the digital world expand, trust in digital services is eroding. To win more loyalty from customers, organizations need to address rising privacy concerns by seeking a competitive advantage in becoming more trustworthy. Of course, the real source of new business opportunities is not blockchain identity itself, but the myriad of applications it enables.

## WHAT IS IN IT FOR CUSTOMERS?

Giving users a simpler and safer solution to manage personal data, means empowering them to prove their identity and share information only and when they decide to. A seamless experience when interacting with your brand results in a simplified transaction processes, improved user experience and, most importantly, trust restored.

## WHAT IS IT IN FOR IOT?

Virtually every device we own has an access to the internet. Gadgets, wearables and systems are becoming smarter, more connected and autonomous. They are now able to request a service or start an action without human intervention. Using Nxxttech identity, each device can present itself, communicate and execute orders directly peer-to-peer.
